## Superior Performance

### High Response Frequency

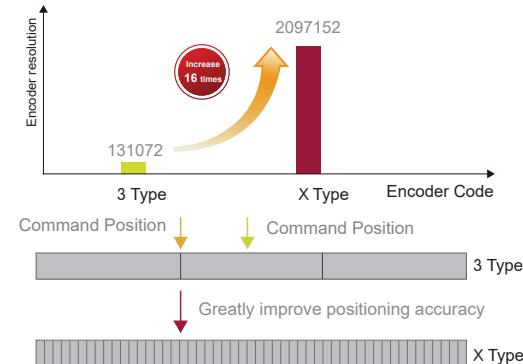

Based on advanced motion control algorithms, the velocity loop bandwidth is up to 3.2kHz, faster instruction tracking and shorter positioning time.

### High Precision Positioning

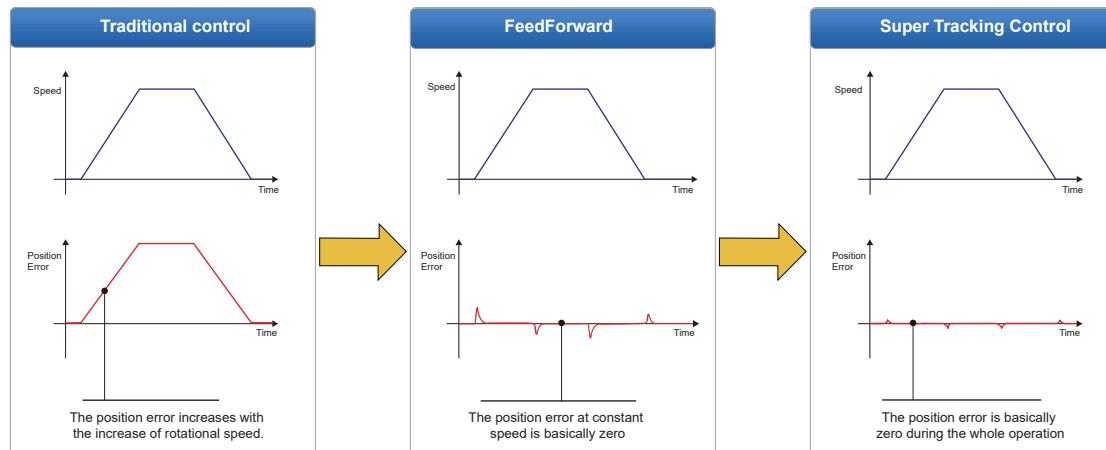

The low cogging torque motor is equipped with high-resolution absolute encoder and built-in high-precision position compensation algorithm, which makes the servo system run more smoothly and with higher accuracy, and significantly improves the positioning accuracy of the equipment.

- 21-bit Absolute Multi-turn Magnetic Encoder
  - ◆ High resolution, up to 2,097,152 divisions pre revolution
  - ◆ Optional battery backup for 16-bit multi-turn
  - ◆ Strong vibration resistance
  - ◆ Resistant to dust and oil stains
  - ◆ Anti condensation

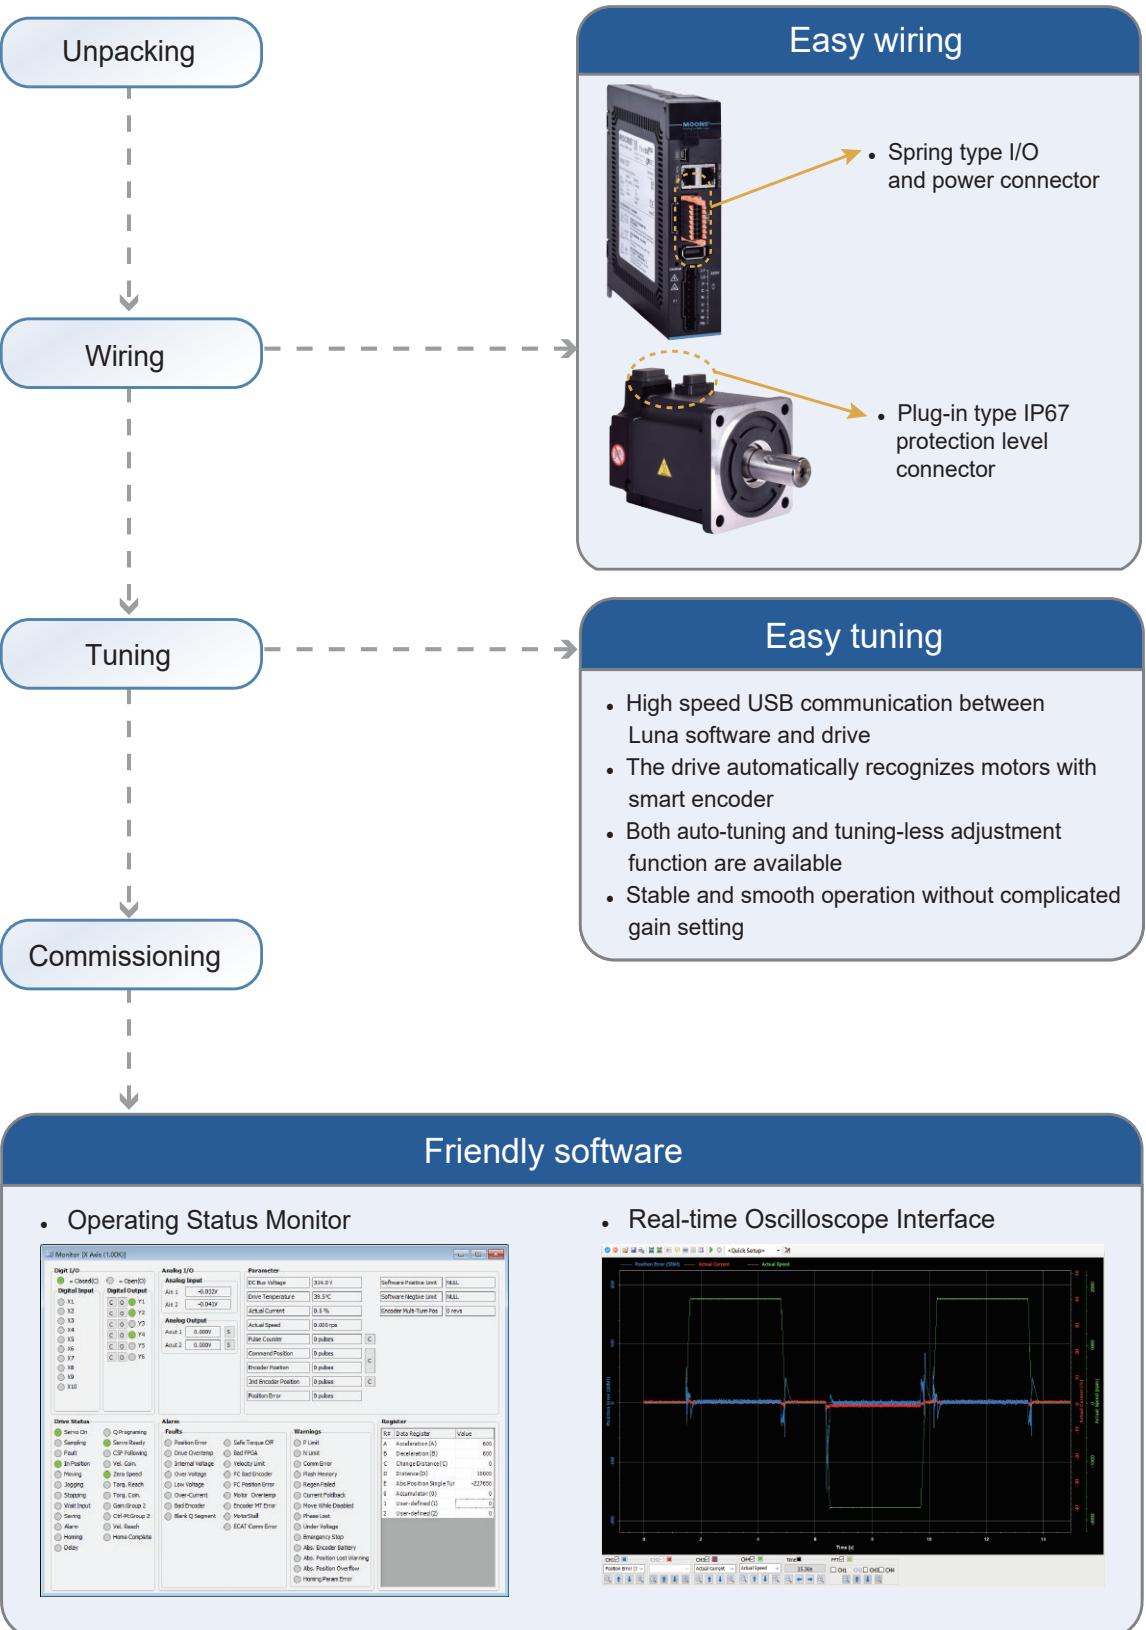

### Super Tracking

Using the super tracking control function, the motor not only runs at a constant speed, the following error is basically zero, and the following error is also close to zero during acceleration and deceleration, improving the trajectory accuracy of high-rigidity equipment.

## Easy Set-up

For M54S servo system, our commitment is to improve your work efficiency on every step of the way, from system installation, tuning and maintenance.

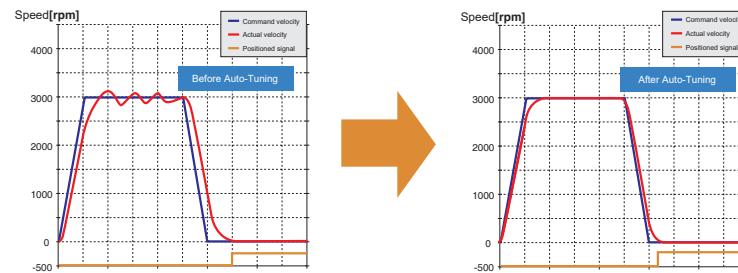

## Easy Tuning

### Auto-tuning

The real-time auto-tuning algorithm can automatically identify the load inertia (ratio), gain and vibration suppression parameters in real time. The auto-tuning function can greatly shorten your system tuning time, improve system responsiveness and equipment production efficiency.

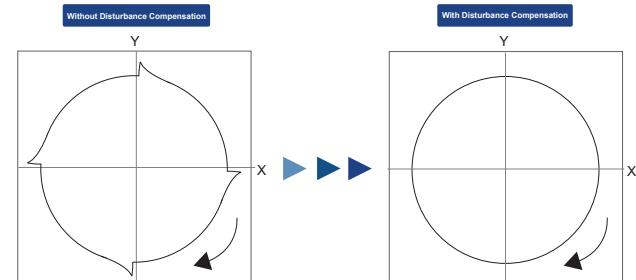

- ◆ No limitation towards any load type and drive control mode.
- ◆ High robustness for maximum control of servo system stability.

### External Disturbance Compensation

The external disturbance compensation can effectively suppress the phenomenon of overquadrant bulge caused by the different friction of the mechanism and the influence of load change, and improve the track accuracy in multi-axis synchronous control.

For example, the accuracy of arc trajectory in the interpolation control of XY mechanism can be improved.

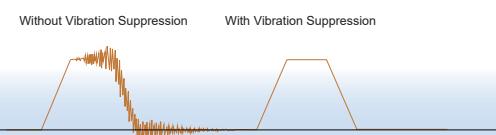

Quadrant protrusion phenomenon in simulating arc trajectories

### Notch Filters

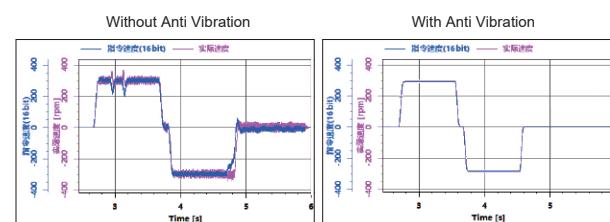

M54S series supply there are 4 notch filters available for suppress mechanical vibration. Filtering frequency range is 100 ~ 4000Hz.

- ◆ 2 sets of automatically set notch filters can search and set resonance frequency automatically.
- ◆ 2 sets of manual notch filters for more adjust options.

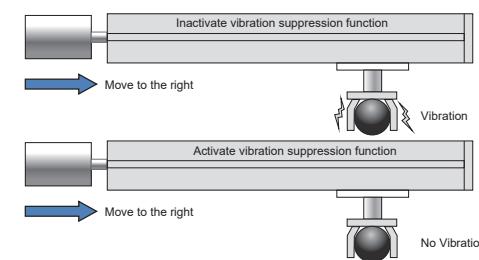

### Novel Resonance Suppression

The new resonance suppression function of the M54S series products can effectively suppress the low-frequency vibration caused by the resonance of 100 ~ 1000Hz.

### Mechanical End Vibration Suppression

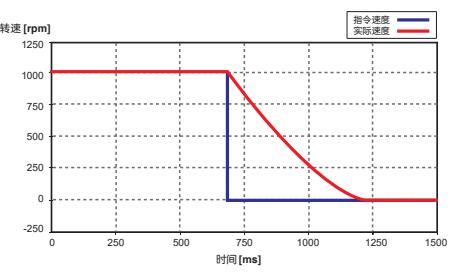

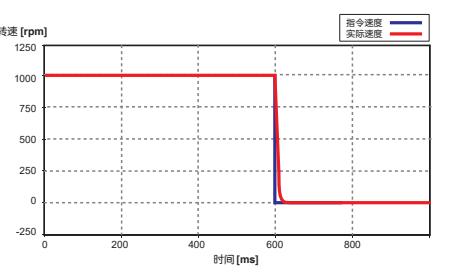

Vibration at the end of the machine will lead to longer system setting time, resulting in the decrease of product precision or production efficiency. M54S servo can suppress vibrations at the end of the machine, shortening tuning time, increasing the system precision and productivity.

## Reliable operation

### ● Dynamic Brake

Dynamic brake is a mechanism that stops the motor with the fastest speed by shorting the motor three-phase in case of an emergency, the intention is to protect the safety of equipment and surrounding.

Without Dynamic brake	With Dynamic brake
	
<b>Without Dynamic brake</b> The drive will disable, decelerate and free stop uncontrollable while a fault occurs. The deceleration time and distance are determined by the system inertia and friction.	<b>Dynamic brake is in effect</b> The velocity command is set to 0 as soon as the drive is disabled. The actual velocity ramps down immediately as the braking applies.

### ● Built-in Regenerative Absorbing Resistor

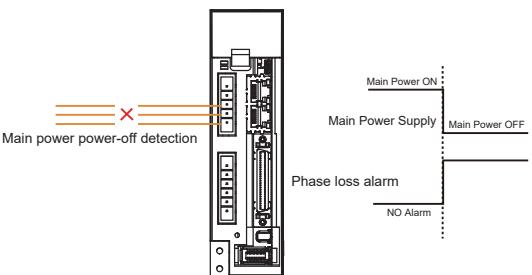

750W and 1000W drives have built-in regenerative absorbing resistor, it can consume the regenerative energy generated when the motor and load decelerate rapidly, make sure the servo system can stop quickly and operate reliably.

No additional absorbing resistor is required for most applications.

### ● Main Power Power-off & Phase Loss Detection

The power source is monitored during the operation process, it detects whether the main power power-off or phase loss, and provides faster protection measures for the servo system that fail caused by sudden power failure.

## New Motor Features

### ● Various Product Lineup

- ◆ Power Rating: 50W ~ 1000W
- ◆ Frame Size: 40/60/80/100/130mm
- ◆ Low / Medium / High Inertia Servo Motor

### ● Low, Medium, High Inertia Servo Motor

The SM3 series of servo motors with the same power provide a variety of moment of inertia options, choosing the right motor is conducive to optimizing the inertia ratio of load to motor and improving mechanical performance.

Low inertia motor	Medium inertia motor	High inertia motor
<p>Suitable for most of applications</p> <ul style="list-style-type: none"> <li>◆ Low inertia load</li> <li>◆ High acceleration and deceleration</li> <li>◆ Quick and frequent starting and stopping</li> </ul>	<p>Suitable for applications with low mechanical stiffness</p> <ul style="list-style-type: none"> <li>◆ Belt and synchronous belt load</li> <li>◆ Large inertia load</li> <li>◆ Stability improvement during high-speed operation</li> </ul>	<p>Suitable for large inertia load</p> <ul style="list-style-type: none"> <li>◆ Large inertia belt load</li> <li>◆ Low speed and high torque</li> <li>◆ Turntable with a large moment of inertia</li> </ul>

### ● Smaller Size and Higher Efficiency

The servo motor adopts a new structure and magnetic circuit design, making the motor smaller and higher power density; At the same time, the electromagnetic scheme is optimized to improve the efficiency of the servo motor and reduce the heating.

### ● IP67 Protection Level

The SM3 series servo motors meet the IP67 protection level, are designed to protect against water and dust (Except transfixion part of shaft).

If the transfixion part of shaft needs to meet the IP67 protection level, please install the oil seal or select the servo motor model with oil seal.

Note: The installation of oil seal will bring extra torque loss. With oil seal, It is recommended to reduce the rating of motors with oil seals by 10%.

## Various of Control Mode

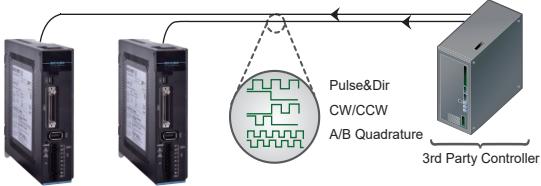

### Digital Pulse Position Modes

Support STEP/DIR, CW/CCW pulse and A/B quadrature pulse.

**Low-speed Open Collector Pulse Input:** 500kHz, 24VDC

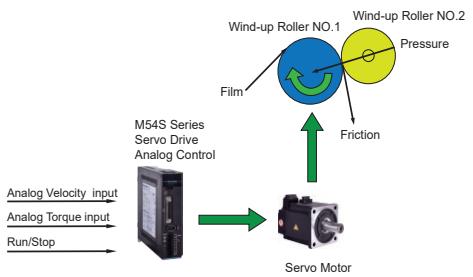

**Low-speed Differential Input:** 500kHz, 5VDC

**High-speed Differential Input:** 4MHz, 5VDC

### Analog Input / Output Control Modes

M54S Series RS485 Type Certain models have -10V ~ +10V two analog inputs can be used for analog velocity and analog torque control.

### Built-in Software PLC — Q Program

Q Programmer is MOONS' own single-axis motion control software based on SCL commands. It can be used to create sophisticated and functional programs that can be saved to a drive's nonvolatile memory, and then run stand-alone, or without a permanent connection to the host. Q drives offer a high level of flexibility and functionality to the machine designer and system integrator.

#### Features:

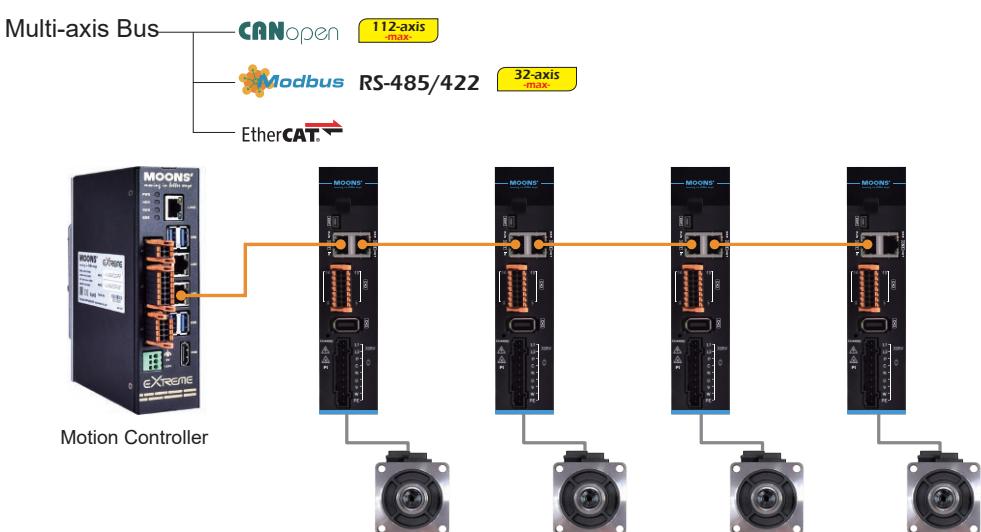

- Motion control commands (relative position, absolute position, homing mode, etc.)
- Multi-tasking
- Conditional Processing (external I/O, internal command)
- Math Calculation (+, -, \*, /, &, or)
- Data register manipulation
- Logic motion commands (loop, call functions)

Line	Label	Cmd	Param1	Param2	Comment
1		MT	1		Turn ON Multi-Tasking
2		DL	3		Turn OFF limits
3		PF	2000		Set Position Fault limit
4		CC	2		Set continuous current to 50%
5		CP	2		Also set peak current to same
6		DI	4000		Make distance positive for CW
7		JM	1		Set Jog mode to positioning
8		JS	1		Set Jog speed to 1 rev/sec
9		JA	10		Set Jog accel to 10 rev/sec/sec
10		CJ			Start jogging
11	Label2	TR	x	100	Test Reg "x" against 100
12		Q3	G	#Label1	Jump if greater than
13		TR	x	-100	Test Reg "x" against -100
14		Q3	G	#Label2	Jump if greater than
15	Label1	SM	M		Stop move with max accel (AM)
16		WM			Wait for stop to complete
17		EP	0		Set encoder position to zero
18		VE	1		Set Velocity to 1 rev/sec
19		DI	-8000		Set home offset distance (CCW)
20		FL			Do a Relative move
21		WM			Wait for move to complete
22		SP	0		Set absolute position to zero
23		AX			Clear any faults just in case
24		WT	0.1		Wait 0.1 seconds
25		ME			Enable servo drive
26		CC	2.5		Set current to normal
27		CP	5		Set peak current to normal
28		MT	0		DisableMulti-Tasking
29		QX	3		Jump to Program 2

### Field Bus Control

M54S servo system support various of industrial field bus options such as EtherCAT, CANopen, Modbus/RTU, Modbus/TCP, EtherNet/IP and Profinet.

EtherCAT® is a registered trademark, licensed by Beckhoff Automation GmbH.

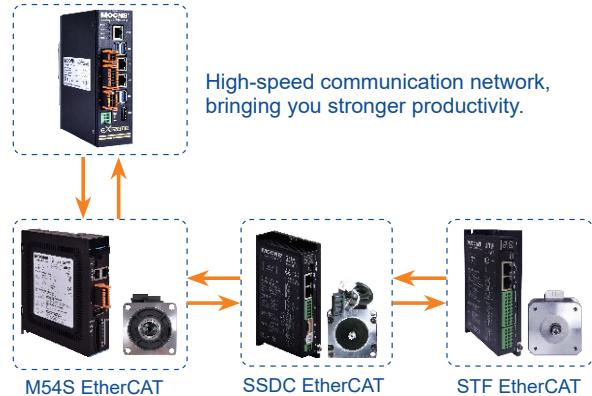

## Various of Field Bus

### EtherCAT

#### High Speed, High Efficient

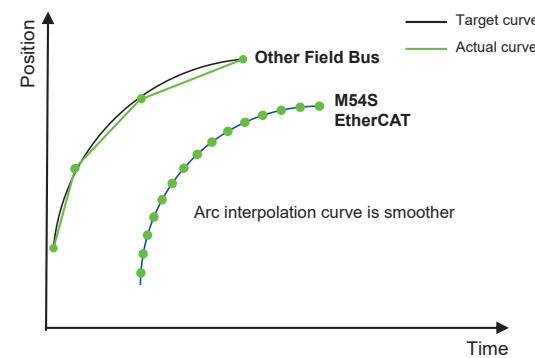

Full duplex, communication baud rate 100Mbps Support CoE(CiA 402 protocol), VoE (Vendor over EtherCAT) Support PP, PV, TQ, CSP, CSV, CST, HM mode, Full closed-loop mode

Combine with MOONS' EtherCAT stepper series product, we can meet all your motion demands.

#### High Performance

The synchronous cycle of M54S series EtherCAT products is up to 0.5ms, which technically makes the position command subdivision smaller, and the equipment movement smoother.

### CANopen

Standard CAN bus interface is available in M56S series servo drives, which makes it easy to get integrated to the industrial field bus.

Features	Specification
Physical Layer Standard	CiA 303-1 Cabling and connector pin assignment
Communication Protocol	CIA 301 Application Layer and Communication Profile CiA 402 Device Profile Drives and Motion Control
Bus Connector	RJ45
Communication Rate	12.5Kbps, 20Kbps, 50Kbps, 125Kbps 250Kbps, 500Kbps, 800Kbps, 1Mbps
Message Type	SDO, PDO, SYNC, EMCY, NMT, Heartbeat
Control Mode	Profile Position, Profile Velocity, Profile Torque, Homing Mode, Q Program
PDO Data	4 RxPDOs, 4 TxPDOs
Support Axis	Up to 112 axis

### Modbus

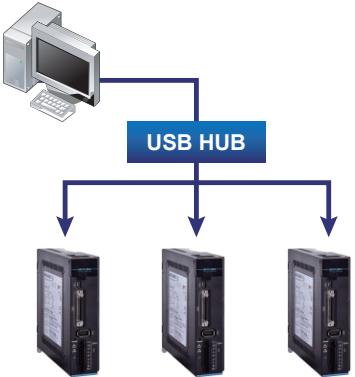

M54S series servo drive supports Modbus/RTU communication protocol which is based on RS-485. Through Modbus protocol, it provides an easy motion control platform for modifying drive parameters, and monitor the status of the servo drive.

Features	Specification
Physical Layer Standard	RS-485
Communication Protocol	Modbus/RTU
Bus Connector	RJ45
Communication Rate	RS-485: 9600bps, 19200bps, 38400bps, 57600bps, 115200bps
Control Mode	Position Mode, Velocity Mode, Torque Mode, Homing Mode, Q Program
Support Axis	Up to 32 axes

## Friendly Software

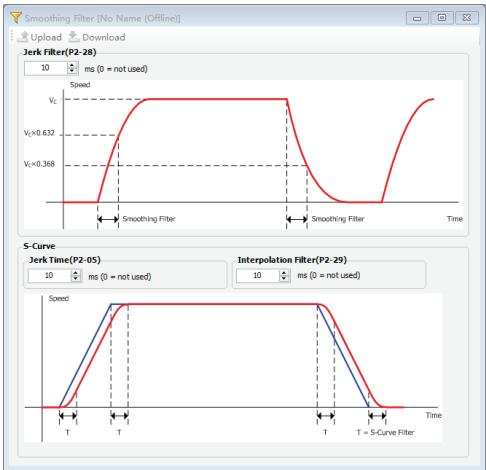

### ● USB Multi-axis Tuning

Based on USB communication, it can realize multi-axis tuning, simple and convenient.

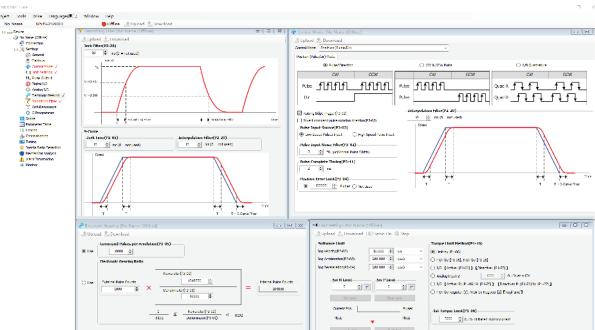

### ● Graphical Setting Interface

The setting interface adopts a simple and clear graphical interface, which can intuitively set the required functions.

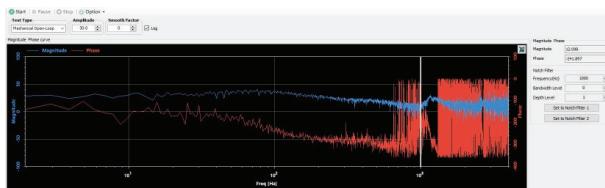

### ● Tree Structure

Newly designed tree-structure software, multi-window display, clear function classification.

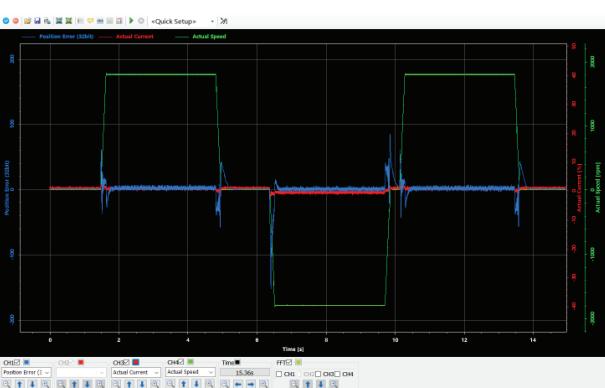

### ● Mechanical Analysis

Quickly diagnose the frequency characteristics of mechanical equipment and draw a Bode diagram. It can be used to detect the resonance point and frequency response characteristics of the machine, and quickly set the notch filter.

### ● Powerful Oscilloscope Function

- Real-time data curve display
- Up to 4 channels with 16bit data per channel and 8kHz sampling rate
- Up to 2 channels with 32bit data per channel and 8kHz sampling rate
- In the selected cursor area, display the maximum value, minimum value, root mean square, etc.
- Customizing trigger conditions
- Monitoring the operation status of the drive and the digital inputs and outputs

## General Specifications

### Safety Certification

M54 series products are designed to meet the following standards.

		Drive	Motor	
Europe	EMC	EN 61800-3	EN 60034-1	
			EN 61000-6-2	
			EN 61000-6-4	
	LVD	EN 61800-5-1	EN 60034-1	
			EN 60034-5	
UL Standard		UL 61800-5-1	UL 1004-1 UL 1004-6	
CSA Standard		C22.2 No.274.13	CSA C22.2 No.100	

### Motor General Specifications

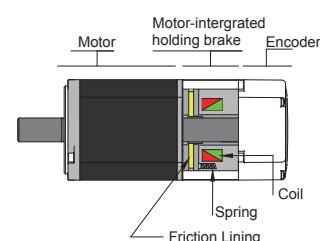

Insulation class	Class F (155°C )	Ambient temperature	Working temperature: 0°C ~ 40°C Storage temperature: -20°C ~ 60°C
Protection level	IP67 ( Except transfixion part of shaft )	Humidity	Storage and usage: 20 ~ 85%RH ( no condensation )
Installation conditions	indoor installation, avoiding direct sunlight, corrosive and flammable gas	Altitude	Derating is not required for altitudes not higher than 1000m
Vibration	Under 49m/s <sup>2</sup> , 10 ~ 60Hz(Do not use continuously at resonance frequency )		Derating 1% for every additional 100m for altitudes between 1000m and 2000m

### Brake Specifications

Motor brake is used to prevent motor from rotating by power off the servo system. The most common way of use is in vertical application, when the motor is disabled or powered off, in order to prevent the displacement of the mechanical mechanism driven by the motor due to gravity and other reasons, the servo motor with brake needs to be used.

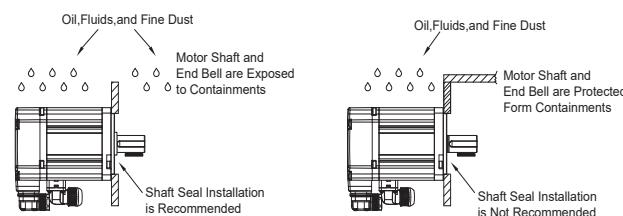

When the brake is powered on, the armature is adsorbed, the brake pad is released, and the motor can operate normally. When the brake is powered off, the armature is released, the brake pad is locked, and the motor can't rotate normally.

Frame	40mm	60mm	80mm	100mm	130mm
Static Friction Torque (Nm)	0.32	1.5	3.2	8.0	18.5
Rated Voltage (VDC)			24		
Power Waste (W @ 20°C)	6.3	7.2	9.6	14.4	24.3
Current (A)	0.26	0.3	0.4	0.6	1.05
Braking Time	< 70ms (Standard air gap,at 20°C)				
Release Time	<25ms				
Release Voltage	18.5VDC max.(at 20°C)				

### Shaft Seal

Industrial oil seals can block contaminants (oils, impurities) to extend the life of the motor. The oil seal will produce a certain resistance to the motor shaft, about 10% torque will be lost.

## More Functions

Features	Drive Overview	Motor Overview	Servo Drive and Motor Matching List	Drive Specification	Motor Specification	Accessories
Position / Velocity / Torque Control						
Support position control, velocity control and torque control.						
<ul style="list-style-type: none"> <li>Position control supports pulse, internal position or communication command for positioning.</li> <li>Velocity control supports analog, internal multi-segments velocity or communication commands.</li> <li>Torque control supports analog, internal torque or communication commands.</li> </ul>						
Control Mode Switching						
Position control, speed control, and torque control can be switched using an external digital input. The P and R types of drive can switch between 2 control modes.						
Gain Switching Function						
The gain during operation and stop can be automatically switched under certain conditions. Or freely switch between the two sets of gains via digital input.						
Internal Multi-segment Velocity Function						
Velocity control is possible with digital inputs. 8 segments of velocity can be saved in the drive, and the corresponding internal velocity control commands can be selected via digital inputs.						
Pulse Input Inhibit Function						
When the pulse inhibit input signal is valid, the drive ignores the external pulse command and the motor decelerates to stop.						
Internal Software Position Limit						
In absolute value systems, the software position limit can be set to protect the device without the external limit sensor.						
Configurable Input and Output						
<ul style="list-style-type: none"> <li>The input functions can be assigned to any of the digital input by parameters.</li> <li>The output functions can be assigned to any of the digital output by parameters.</li> </ul>						
Encoder Feedback Output						
<ul style="list-style-type: none"> <li>The motor encoder feedback and the second encoder feedback are output in A/B/Z pulse mode, and the pulse division output is supported.</li> <li>Support for pulse command By-pass output.</li> </ul>						
Analog Input						
Support 2 analog voltage inputs for analog velocity control and torque control.						
Analog Monitor output						
2 analog output, real-time voltage output the command or actual speed, command or actual torque, or the actual position error of the motor.						
Zero Speed Clamp Function						
In the velocity control mode, when the zero speed clamp signal is valid, when the actual speed is less than the zero speed threshold value, the servo motor enters the zero position lock state. At this time, the internal position loop of the drive is activated, and even if the external force rotates the motor, it also returns to the clamping position.						
Stop Mode Setting						
When the drive servo off or fault, the stop type(free run, reduce speed, dynamic brake ) and the status after stopping can be selected.						
Moving Command Smoothing Filter						
The command smoothing function filters the position command and the speed command, which makes the servo motor run smoother even if the command is abrupt.

	CANopen		-C Control Function Type: CANopen communication						
Front Panel			5 keys(MODE, RIGHT, UP, DOWN, SET) 5 - digital LED Display						
Regeneration Resistor			750W Built-in regenerative resistor (All models can be equipped with external absorption resistors)						
Control Mode			-EC Control Function Type: CoE(Complies with CiA402 standard), support PP, PV, TQ, CSP, CSV, CST and HM mode, Q programs that are pre-stored in the drive can also be started with EtherCAT instructions -C Control Function Type: Complies with CiA402 standard, support PP, PV, TQ and HM mode, Q programs that are pre-stored in the drive can also be started with CANopen instructions						
Control Input Signal			Alarm Reset, CW/CCW Limit, Gain Select, Zero Speed Clamp, Emergency Stop, CW/CCW Torque Limit, Speed Limit, General Purpose Input						
Control Output Signal			Warning Output, Fault Output, Servo Ready, Velocity Reached, Position Reached, Servo-on Status, Brake Release, Dynamic Position Error Following, Positioning Complete, Zero Speed Detected, Velocity Coincidence, Torque Coincidence, Velocity limit, Torque limit, Homing Finished, Soft Limit CW/CCW, General Purpose Output						
Protection			Over Current, Over Voltage, Under Voltage, Over Temperature, Bad Encoder Feedback, Over Load, Over Speed, Position Error, STO, CW/CCW Limit, Communication exception						
Dynamic Brake			Built in						
STO <sup>*1</sup>			Built in						
Weight			M54S-23A0 ■ N: 1.0Kg M54S-24A5 ■ N: 1.3Kg M54S-26A0 ■ N: 1.5Kg						

Note: \*1 Reserve STO interface. If you need this function, please contact sales personnel.

Model	Specification	Description	Outline
MSOP-BA01	Battery	For motor with battery absolute encoder	-
MSOP-BAKIT01	Batteries and battery cases		

#### External Regenerative Resistor

Model	Specification	Description	Outline
REG100W120R	100W, 120Ω	Regenerative absorbing resistor	-
REG200W120R	200W, 120Ω		
REG300W120R	300W, 120Ω		

#### Drive Connector Kit

Model	Description	Outline
MSOP-P109P	P1 Power Connector, JST handle lever	-

#### Motor Connector Kit (Motor Side)

Model	Description	Outline
MSOP-MTKITA	80mm and lower frame size motor (without brake connector)	-
MSOP-MTKITD	80mm and lower frame size motor (with brake connector)	
MSOP-MTKITF	100mm/130mm frame size motor (angle plug type)
